How to print quotation marks in C?

We can print the double quotes ("") ,using **\"** escape sequence in printf.

We write a \ right before beginning of quotation and

end of the quotation. For example:

#include<stdio.h>

int main()
{
  printf("\"\"");

  return 0;
}

Output: **""**

Print Hello World with in double quotes

```c
#include<stdio.h>

int main()
{
    printf("\"Hello World\"");

    return 0;
}
```

Output:

"Hello World"
